About our company

GariDigital is a complete in house service for all website and digital needs. Even though we were formally established in 1999, our internet experience goes back to 1992, and includes creation of websites, CD design, automated web application services and software, troubleshooting and all type of computer needs for clients nationwide.

We are your full service web solution. Our extensive background in product development shows the effectiveness of a well designed and user friendly website. Our creations enable our clients to successfully integrate and blend our design with their marketing and business needs.

GariDigital is the services division of parent company, Garinet Global Inc, which averages over one millions hits per month from over one hundred different countries around the world.

When you think of GariDigital, think about a place where you will find all your web design needs from start to finish.

Assumptions

This document assumes that you are running vTiger 4.2 (<http://www.vtiger.com/products/crm/index.html>) and you are familiar with some PHP (<http://www.php.net>)

Problem

As of this writing (Oct 19, 2005), when you export an invoice to PDF in vTiger 4.2, if the width of your logo is over 118 pixels, you will find that the company information overlaps the logo, which may not be desirable at times.

Figure 1: Company information overlapping logo

Solution

I thought the viable solution for this situation would be to have the company information push to the right so that the invoice can look more professional.

Figure 2: Company information NOT overlapping logo

Procedures

To push the company information to the right so that it doesn't overlap the logo, follow these simple procedures:

1. Navigate to your vTiger CRM root folder and go to: “\modules\Invoice”
2. Open the file “**CreatePDF.php**” in your favorite PHP editor. I currently use PSPad (<http://www.pspad.com/en/>)
3. Navigate to the line of code “**\$this->Cell(40);**” within function “**setInvoiceTitle**”
4. Increase the 40 to a number that works for you. In my case 60 did the trick. So After I modified that line my code looked like this:
 - a. **\$this->Cell(60);**
5. Save your file

Test Your Implementation

1. Logon to your administrative web interface of vTiger CRM
2. Click on the “**Invoice**” tab and then on the “subject” of the invoice you want to create a PDF for.
Click on the “**Export To PDF**” button and should see the results illustrated on Figure 2 above.
 - If you want your PDF invoice to open in a new window when you click on the “Export To PDF” button you may want to read “How to export PDF invoices in a new window in vTiger CRM 4.2” either from the vTiger forum or the following link <http://www.garidigital.com/docs/vtiger>
3. If you learn something new about vTiger CRM and there is no documentation for it, take a few minutes to create a how-to and share it with vTiger CRM users. We will all thank you for it!

How-to Ideas for vTiger CRM

If any of the following How-Tos are not yet done, I think that it would be nice for you to contribute with them if you have the basic knowledge:

- How to create modules in vTiger CRM
- How to create themes in vTiger CRM
- How to modify invoice PDF template
- How to modify quote PDF template
- [How to export PDF invoices in a new window \(done\)](#)
- [How to make company information not overlap on logo in invoice \(done\)](#)
- How to make long product names not overlap on quantity in invoice

Revisions

You will always find the latest version of this and other vTiger Docs written by me at the following location:
